Client Filtering – Free for 3 Months

Netsweeper's Continuity Filter is an endpoint web filter that Netsweeper is offering, free of charge for three months, to protect school/business-owned devices that will be taken home during the COVID-19 pandemic. It is based on Netsweeper's proven Client Filter application, and supports Windows, Mac OSX, iOS, and Chrome.

What are we offering?

Netsweeper is offering free endpoint web filtering for Windows, Mac OSX, and Chrome. This filtering service will provide endpoint filtering based on a single, standard filtering policy that ensures compliance with both Ofsted (UK) and CIPA (US) online safety regulations. The filtering application will point to Netsweeper's existing cloud infrastructure, meaning schools/businesses do not need to deploy any on-site equipment or software beyond the client filter itself.

Subscribing schools/businesses will not need to sign into any Netsweeper systems to manage filtering, as this is a managed service based on a single filtering policy. This means few resources are required to operate this new service, and educators can focus on other pressing priorities.

How Does it Work?

- Schools will need to deploy the Netsweeper Client Filter application on all endpoint devices that need to be filtered.

- The Netsweeper Client Filter will point to Netsweeper's cloud infrastructure, where the Policy Server will apply the filtering policy and ensure students are protected.

- Netsweeper will manage the filtering policy to ensure compliance with Ofsted and CIPA regulations.

- Netsweeper will also provide reports on user activity to ensure schools/businesses are aware of the blocking activity occurring and identify any issues.
